

How to try PersonPrivacy

A short walkthrough for friends & family testers

Prepared September 10, 2026 · From Maria, your personal privacy concierge

Quick start

Open <https://sandbox.personprivacy.com/try> Enter access code try-with-meher Unlock Then follow Scan Results Removals Bot Dashboard.

Thank you for helping Meher pressure-test PersonPrivacy before a wider launch. This sandbox uses simulated broker data and dry-run removals so you can explore every surface without touching your real records or billing. Please treat anything you enter as confidential to this invite group.

1. Unlock the sandbox

- Go to <https://sandbox.personprivacy.com/try>
- Enter the access code: try-with-meher
- Tap Unlock. You should land on Scan with a teal "Friends & family preview" banner.
- If the banner is missing or you get bounced back to /try, unlock again - the session cookie lasts about 14 days.

Tip

Use the same browser for the whole walkthrough. Private/incognito windows will ask for the code again.

2. Run a privacy scan

Scan is where you tell PersonPrivacy who to look for. In the sandbox, results are simulated from the name and details you enter - they are not a live sweep of the open web.

- Enter a first and last name (you can use a test persona).
- Optionally add city, state, age, email, or phone.
- Tap Start privacy scan and wait for the progress UI to finish.
- You will be taken to Results when the scan completes.

3. Read the results

Results summarize exposure score, risk level, and the broker-style listings found for this scan. Each listing shows rough details such as location signals and relative severity.

- Skim the score and risk badge first - they set the tone of the report.
- Open a few listings and note whether the details feel believable for the persona you entered.
- When you are ready, start removals / enroll so the bot queue can begin.

4. Watch the removal bot

The Bot page is the operations view: queued jobs, status chips, and activity as PersonPrivacy works through broker-style removals. In this sandbox every job is a dry run - nothing is submitted to a real data broker.

- Confirm jobs move from queued running succeeded (or similar).
- Check that the page stays usable while jobs update.
- If the queue looks empty, go back to Results and start removals again.

5. Check the dashboard

Dashboard is the home base after a scan: latest exposure snapshot, active removal work, and shortcuts into the rest of the product.

- Confirm your latest scan summary appears.
- Look for links into Bot, Report, Coverage, and Profile.
- Note anything that feels confusing or unfinished - that feedback is gold.

6. Open the privacy report

Report turns the scan into a shareable privacy dossier - the same style of document Maria emails after a real scan, with letterhead, watermark, and a plain-language summary.

- Open Report from the nav or dashboard.
- Skim the executive summary and broker findings.
- If download/email actions appear, try them and note whether the PDF looks official enough to trust.

7. Optional surfaces worth clicking

Profile

- Review identity fields used for monitoring. In sandbox these stay local to the preview.

Household

- Explore adding family members if you want to test multi-person flows.

Coverage

- See which broker categories PersonPrivacy aims to cover.

Pricing

- Read the plan story - sandbox does not charge cards.

Guides

- Browse educational how-tos if you want the product voice outside the scan flow.

What is real vs simulated

- Real: product navigation, copy, report layout, bot status UX, and overall flow.
- Simulated: broker listings, exposure scores, and removal outcomes.
- Dry-run: removal jobs never contact live broker sites in this environment.
- No billing: do not enter real payment details even if a pricing CTA appears.

Feedback Meher wants

- Where did you get stuck or hesitate?
- Did the scan results bot path feel clear?
- Does the report feel trustworthy / official?
- Anything that felt too salesy, too quiet, or too technical?
- Mobile notes if you tried on a phone.

Need help?

Reply to Meher, or email maria@personprivacy.com and mention you are on the friends & family sandbox. Include what you clicked last and a screenshot if something looked wrong.

Keep handy

Entry: <https://sandbox.personprivacy.com/try> Access code: try-with-meher Concierge: maria@personprivacy.com

Thank you again for taking the time. Your notes help shape what PersonPrivacy becomes before strangers ever see it.
